HIGH SCHOOL STUDENT PROFILE 2024

Uniting High Schoolers Nationwide for Climate Action: Princeton Day School

Princeton Day School students are aiming to promote discussion, exchange ideas and solutions, and unite high schoolers across the nation from diverse backgrounds to address climate change.

The National High School Climate Forum (NHSCF) is a dynamic student-led initiative founded in 2020, committed to uniting high schoolers nationwide in the fight against climate change.

As the Executive Team, we spearhead this forum, providing a platform for youth leadership and action. Our monthly delegate meetings, workshops, and speaker events foster dialogue and collaboration among diverse regions, acknowledging the unique challenges each faces. With 200 delegates from over 160 schools across 40 states, the

NHSCF ensures that delegates are exposed to diverse environmental approaches and can work together to find essential solutions for the climate crisis.

The goal of the NHSCF is to actively inspire and empower delegates to take real-world action and create positive change for the environment in their local communities.
