Methodology

ecoAmerica designed and administered this survey, which was conducted online from June 26 – July 4, 2025, using SurveyMonkey. The survey yielded a total of 1,013 complete adult responses and used the Census Bureau’s American Community Survey to weigh the national general population and reflect the demographic composition of the US. The sample was drawn from an online panel, and the respondents were screened to ensure that they were over the age of 18. The margin of error for the sample is +/-3%. In interpreting the survey results, it is important to note that all sample surveys are subject to possible sampling errors. Thus, the results of a survey may differ from the results that would be obtained if the entire population were interviewed. The sampling error size depends on the total number of respondents in the survey and the percentage distribution of the responses to a particular question. For example, if 50% of the respondents in a sample of 1,013 respondents answered “Yes” to a particular question, we can be 95% confident that the true percentage would fall within 3 points or range from 47% to 53%.
